

Dear Ms. Dortch,

I am writing on behalf of the stations that I represent, KJMM-FM/KGTO-AM. Our stations have respectively contributed to enhancing the communities that we serve, Tulsa, OK. and combined the Oklahoma Broadcasters have provided \$110,000,000 in our communities in 2003. We all have a vested interest in serving the communities in which we are licensed. Unlike "satelite radio stations", we live, go to church, school, events, shopping and are employed in the same communities as our listeners, so it is obvious that serving our communities is in the best interest of the station! To allow satelite radio stations the oportunity to "re-transmit" local news and weather is a duplication of services already provided by our stations and our fellow broadcasters. KJMM/KGTO provide local and national news that relates to our listeners lifestyles. We also provide local weather/traffic updates hourly and do an excellent job of keeping our listeners informed to what is taking place in our community. We have supported and contributed to a great deal within Tulsa, including fundraising events with local high school alumni to raise funding for scholarships for graduating seniors, community block parties to help curb youth violence and educate our listeners about "positive & constructive" activities, partnered with local health organizations to have health fairs to help educate our communitites about health risks including stroke, heart disease, cancer and AIDS. By allowing satelite radio to do "what they said they wouldn't do", provide "local content", it opens up the future opportunity to go beyond that scope into further intrusion of what Oklahoma local Broadcasters already provide in terms of content and services for our community. It is with these thoughts in mind that I write to you supporting the NAB's Petition to halt any further intrusion of "local" broadcasters efforts within their communities by entities that don't have the same "local" vested interest in the support of the community.

Bryan K. Robinson
General Manager
